

Highly Accurate Two Color Online Infrared Non-Contact Pyrometer

CE 600°C to 2500°C

AST A450C is a highly accurate digital two-color radiation pyrometer. This device measures the temperature of an object by calculating the ratio of the energies at two different wavelength bands. Temperature measurement is not effected by parameters affects the amount of energy reaching to pyrometer. This makes a ratio thermometer inherently more accurate. The ratio technique may eliminate, or reduce, error in temperature measurement caused by changes in emissivity, surface finish and energy absorbing materials such as water vapour between the pyrometer and the target.

The pyrometer can be used in both ratio and single color mode. Parameters like, emissivity ratio, emissivity, response time, analog output sub-range are adjustable through the software supplied.

AST A450C is provided with USB 2.0 connector with cable. The pyrometer can be powered through USB port. In this case no external power supply is required (+24V DC requires for operation of analog output, laser, RS-232 / RS-485 output).
